

WHAT IS COMPREHENSIVE OPHTHALMOLOGY?

Comprehensive ophthalmology provides total eye care, from examinations and vision correction to the diagnosis and treatment of disease through medication and surgery. Here is a breakdown:

General Eye Care:

- Comprehensive ophthalmologists provide routine eye exams, including vision testing and assessments of overall eye health.
- They prescribe eyeglasses and contact lenses.

Diagnosis and Treatment:

They diagnose and manage various eye diseases and conditions, such as:

- Cataracts
- Glaucoma
- Diabetic retinopathy
- Macular degeneration

They may also perform certain eye surgeries.

In essence, a comprehensive ophthalmologist serves as a primary eye care provider, addressing a broad spectrum of eye health needs.

Levenson Eye Associates offers comprehensive ophthalmology care for people with all different types of eye conditions. Ophthalmology includes every aspect of vision care, from glasses or contacts to complicated eye diseases.

At Levenson Eye Associates, our ophthalmologists are board-certified or board eligible. This means they have achieved the highest level of training and education available in their field.

Our ophthalmologists offer many services, procedures, and clinical trials. They provide routine and ongoing ophthalmology care for conditions like:

- Small incision, no stitch, topical anesthesia cataract surgery
- Premium intraocular lens implantation including symphony, restor, and toric options
- Evaluation and treatment of corneal diseases
- Evaluation and treatment of diabetic retinopathy
- Evaluation and treatment of glaucoma
- Comprehensive contact lenses fitting including keratoconus

Our experienced, skilled team of doctors and caregivers will craft an individual plan to address your specific needs.
